Creating the International
Court for the Environment

HOW CAN COURTS AND TRIBUNALS HELP TO MINIMISE CLIMATE CHANGE?

National and international courts and tribunals are playing an increasingly prominent role in the settlement of environmental disputes, and, in recent years, there has been a surge in climate change-related litigation around the world, particularly at a national level.

But how effective has climate change litigation been to-date, and what lessons can be drawn from recent cases? At an international level, can courts and tribunals help to minimise climate change? Do existing international mechanisms and institutions need to be reformed, and/or should a new international environmental court be established?

You are warmly invited to join Stephen Hockman QC and guests in a discussion of these questions, to take place in Bonn on the sidelines of the UNFCCC SBSTA 50 session.

Please note that the venue capacity is limited. Walk-ins are most welcome, but you are encouraged to RSVP to stephen.hockmanqc@6pumpcourt.co.uk to secure a place.

Date: Thursday 20th June

Time: 17:30 – 19:00

Venue: Konrad's I Meeting Room,

Bonn Marriott Hotel (a 5 minute walk from UNFCCC conference venue)
